

The background of the slide is a soft-focus image of pink cherry blossoms. The top half is covered by a semi-transparent pink overlay where the text is located. The bottom half shows the actual blossoms in more detail, with white petals and pink centers.

Coding Crusade's Intellifleet

Hello!

The Developers:

Tsebo Mokoena

Luncedo Lushozi

Filmon Gebremichael

Introduction

Intellifleet is a software system that acts as platform for communication between couriers and customers that seek courier services. The target market is large enterprise business companies that need to transport big shipments.

PROBLEM

Companies over spend on the fulfillment of their deliveries. This could be caused by unoptimized routes that are taken by their drivers. This in turn brings about unnecessary petrol and even maintenance expenses. Another problem is old systems requiring manual allocation of bookings and managers are bound to not make the best optimized allocations.

SOLUTION

In order to solve our problems we have incorporated auto allocation of bookings based on locations and google maps route optimization to have the best choice in fulfilling our customers requests and the companies wellbeing .
